

I'm not robot

**Continue**

From time to time you will hear about yet another attempt to bring Android to the desktop. Yes, there is an official attempt to do this straight from Google, bringing the Play Store to a selected number of Chromebooks. But what if you want this now, or you don't want to buy a new computer to experience what it would be like to use Android apps on your computer? With a little digital elbow grease, it's possible. You can run some of your favorite apps and join Android games by testing one of the many third-party solutions. I looked at various software options that offer this, and came away with four fixed options that will have you running with Android on your Windows PC rather painlessly. The best: Remix OS. Remix OS is my top choice because it's clearly had significant development work. It is a full desktop operating system based on Android. Everything you need to be productive or have fun is there, with the Google Play Store available and of course the ability to use Google Drive, Gmail, Chrome, or any non-Google apps for productivity. Developers have created a slide-out notification menu and reused the software buttons without significantly changing the way Android works. I played Clash of Clans, solitaire, and tricked around in Chrome while trying Remix OS out. It was pretty solid and it was the first time I felt that Android had real potential to move beyond the smartphone or tablet. Remix OS is a smart Android application on the desktop. It may also sound like a small matter, but being able to tap into apps like Snapchat that are currently only mobile is an attractive part of the experience. He talks about how mixing mobile and desktop worlds can mean less time shifting between devices (with more potential distractions, of course). However, it is the most complicated of these software packages to create. You must turn off safe booting, and then select Remix from the startup menu in Windows— basically, you double boot. If you know your way around a computer well enough you'll be fine, but if that concept sounds foreign you should be willing to jump through various hoops to find out what to do. A slide bar lets you keep track of any notifications. Remix is very stable and runs Android Marshmallow, although I wouldn't necessarily recommend using it as your main computer unless your computer needs are quite minimal. And unfortunately the touch support didn't work on my Surface Pro 4, unlike some of the other alternatives I tried here. However, I suspect touch could work with one of the many supported devices. However, I came away impressed with what Jide, the company behind it, has built here. It is especially a great choice if you want to make some Android games as it handles many titles very well. Bluestacks Available for both Mac and Windows, Bluestacks has a clear focus on gaming with many titles waiting for you to download once you turn it on. You can go through the standard Android installation process, Lollipop style. Style: interface makes smart use of tabs so that you can keep multiple applications running at the same time. Bluestacks offers a very good way to put mobile games right on your computer. There are many special buttons along the side that mimic the features you would normally do with a gesture or tap on a mobile device. You'll find special buttons for uploading an APK, taking a photo, grabbing screenshots, and shake the device (easy to use for those games or apps where it performs some kind of action). There is a long list of recommended games while I was also able to grab titles like Clash of Clans from the Play Store and move on without a problem. Installing other Android apps was helpful, as it put favorites like Google Keep just a click away on the desktop. Snapchat didn't work for me, however, giving me an error when I tried to log in. I found this to be the case with other applications as well, so your mileage may vary. Bluestacks has a great emphasis on mobile game streaming. Another component of the platform is BlueStacks TV, which allows you to stream part of your action for the game or view other live streams powered by Twitch. While I'm not a fan of the streaming video game phenomenon, this is as good a way as any to do it if you want to watch some mobile games in action. In all possibilities they are quite impressive, but I found the performance to be slow and buggy at times. AmiduosThe Lollipop-powered Amiduos puts a stock version of Android on your computer without the Google Play Store. It comes preinstalled with The Amazon Appstore and has all the sideloading features of Android, so you can install a Play Store APK if you want to get more Apps powered by Google on your PC. But I used this as an opportunity to check out the entire Amazon underground scene. You get a ton of paid apps for free, although you need to download and update them through the Amazon store instead of Google. Do you recognize the multitasking menu? That's because Android is right on your computer. Ameduos also gives you a more traditional Android experience. I also found it to be the most versatile version of Android to work with the touchscreen on my Surface. It's not yet as super responsive as something like a Pixel C or an iPad, but it was neat that this experience could be hacked together. Swipe down from the top to the notification center, just like on a typical Android phone. Otherwise, you have to rely on mouse clicks and drags to work through the interface, which is quite close to a build Lollipop. It was a pretty solid installation on my Surface Pro 4, although it did use enough processor power to keep the fan running whenever it was (I have 8GB of RAM and an i5 processor). In each operation it was smooth, however, and does not require a huge learning curve. AndyAndy has its advantages, but I got the point with some elements of experience. The platform is loaded with ads and tries to install a Chrome extension that changes the default search page in Chrome. That's what happened even though I. I. box to discard this feature. It's not nice. Developers need to make money and all, but installing bloatware is not the way to do it. It handles much of Android well, especially when you play Android games. The construction is based on Marshmallow, and was quite responsive to the touches on my surface. The stock build was easy to navigate, although you have to sideload the Play Store as it also comes preinstalled with the Amazon Appstore. Do you recognize the multitasking menu? That's because Android is right on your computer. It is a very good choice for gaming and was rather easy to use. But keep an eye on all these unwanted extras being baked in. The future of AndroidIf nothing else, this exercise made me excited about what it would be like to have Android apps for Chromebooks. There are already some good apps and games out there for those Chromebooks that are able to run the Google Play Store. You can peer down the street and see that Android can be useful on a desktop, although it's still going to take some work to do something I'd use every day. This story, How to run Android apps on your Windows PC was originally published by greenbot. Note: When you buy something after clicking on links in our articles, we may earn a small commission. Read our affiliate link policy for more details. A body without a soul is like a house without the necessary supplies for everyday life. One of the important tasks of household owners is to maintain and monitor supplies inside the home. We don't want sour milk at breakfast or an empty fridge when your belly starts to grumble. That's why many people flock to groceries and supply themselves for the next few days. Smart shoppers bring lists of paper and pens while they buy groceries. But, wise and resourceful individual use their Android devices in the grocery store. With extensive and fast improvements in smartphone technology, you can now essentially fit your grocery list inside your Android device. We've searched the Google Play Store and selected some of the best grocery list apps. So without further ado, here are the best grocery list apps for your Android device. From the milk shopping list The non-milk shopping list is the grocery shopping list, the locker list, and the to-do list app within your Android device. Using this app will save your list to your Android device and make it available wherever you go. To start adding an item to a list, just start the app press the Shopping List button. Press the button with a co-contract symbol above to add a new item to the list. You can also add an item by voice or scanning the item's barcode. If the application cannot recognize the item's barcode, you must add the item manually. This will help the application recognize the item's barcode when you scan it again. In addition to adding your grocery list, you can also add additional information for each item to your grocery list. You can specify the quantity, item price, and add your personal note. You can rearrange the items in your list. The app also has a Locker list. Here you can write condiments, condiments, and anything found in your kitchen cupboard. The pantry list will help you remember which ingredients are still available in your kitchen and what item should be purchased. You can also save other tasks to the To-Do List menu. Food Planner and Grocery Food is one of our basic needs. We need food to survive and do it all day, so it is very important to supply the house with a sufficient amount of food. If you're looking for an app that can be used as a food planner and takes into account your grocery list, download and install the Food Planner and Groceries app on your Android device. This app can be used to take into account your grocery list. To open your grocery list, just tap the basket icon at the top of the screen. You'll head to your grocery list. To add an item to the list, you can either manually type the items in the list or scan the item barcodes. You can also add more details for each item, such as its quantity and price. In addition to being used as a grocery list, the app can be used as a virtual meal planner. Add a meal plan for breakfast, lunch and dinner. Name a menu, identify its recipes and place the instructions on how to prepare the meal. I find it convenient to find a meal plan and a grocery list in one app. Make a grocery list and plan your meals with the Food Planner and Grocery app. Mighty Grocery Shopping Lite At first glance, the Mighty Grocery Shopping Lite seems to be an ordinary grocery list app for your Android device, but when I tried its voice recognition feature, I was completely surprised at how smart this app could be. Just like the usual grocery app, Mighty Grocery Shopping Lite lists groceries right on your Android device. What makes this app stand out is the intelligent voice recognition feature. You can access this feature by tapping the microphone icon at the top. The app worked flawlessly as I dictate my grocery items one by one. The application can also determine the quantity and price of the product, such as 5 carrots or 300 g of meat. You can also add multiple items at once. Just make sure to separate each item with and for improved results. The quality of your voice and the English accent can also be the voice recognition results of the application. I'm happy with the lite version of this app. But, if you want to unlock more features, you need to buy the premium version of the app. Unlocking the app will allow you to use its extensive features, such as cloud backup, sync with other devices, barcode scanner, recipes, and more. Create your hands-free grocery lists with the Mighty Grocery Shopping Lite app. Shopping list Before you go to the grocery store, it is very important to list the things you need to buy. You don't want to end up goods in the grocery store and later realize that you forgot an item or two. Creating a list can also help you sort and prioritize items they have to buy. If you want a simple app that lists your shopping, you can download the Shopping List app to your Android device. Although it doesn't have complicated features, this app can dissipate users with its easy interface. The app has a pocket laptop design that makes it look like the virtual pocket notebook on your Android device. The app can allow you to add items to the list in three different ways: manually type a product, talk on the phone, or scan the product barcode. The application allows you to add a barcode for each item. This will allow you to scan an item and add it immediately to your list. You can also highlight important items. You can do this by tapping on an item and selecting Mark Out. To scratch an item from the list, just press and hold the item. You can also sort and rearrange items in your list. Transfer a portable virtual grocery list with the Shopping List app. OI Shopping List If you're not satisfied with a simple grocery list, you can try using the OI Shopping List app and enjoy features that allow you to customize your grocery list. The app has a theme option that allows you to add and change the look of the app. The app contains three themes: Default, Classic, and Android. You can buy additional themes from the Google Play Store at a price. In addition to changing themes, you can also customize the app through the settings menu. You can adjust the font size, shake the phone to clear the list, change quick scrolling, and more. You can also add and save item prices from different stores. This will help you keep track of the prices of each item when buying groceries from different stores. You can also enjoy extensive features by downloading them and installing app add-ons. You can add a voice comment to each item with the OI Voice Note. Import and export your shopping list with OI Convert CSV. Scan the item's barcode and add your list to the Barcode OI Plugin. Grocery iQ You may want to consult the intelligence of the iQ grocery store before purchasing your groceries. This app can be your personal friend while you buy your groceries. You can create a list of things you can buy, scan barcodes, view coupons, share your list, create multiple lists for different groceries, and more. You can add an item to the list manually in the application. You don't have to waste paper when there's an iQ grocery store to keep your grocery list. The app will also organize your list by grouping items into categories. For example, your potatoes, carrots and tomatoes will be placed under fruits and vegetables. This way, you can easily check your list when browsing a specific section of the grocery store. You can also create your list from your desktop computer by . There, you can easily create a list and sync it with your Android device. The app also lets you create multiple lists for a specific store. Under this list, you can add a unique set of items and specific details, such as the price and quantity of the item. In this way, this, can easily switch between your grocery lists intended for a particular store. You can also see coupons and enjoy great discounts with this app. Our shopping while shopping can be a pain in your back, but not if others help you. Using our Groceries app lets you share your grocery list with everyone: your partner, family members, friends, and more. This way, you can easily update and share your grocery list. Just like any ordinary grocery list app, Our Groceries allows you to make a list of things to buy at the grocery store. You can organize your list by grouping items into categories. Since the app doesn't automatically group groceries, you'll need to add the item manually to its specific category. However, after you group the items, the app will automatically group the items you've added to the corresponding category. You can also create food menus and ingredient lists with this app. The Our Groceries app also lets you share your list with other household members. Each member must have the same application installed on their device and must use the same e-mail address. This way, anyone can easily update and view the grocery list. This feature is useful when you want to ask your partner to buy some groceries before you go home from work, or let the kids add their favorite snacks to the list. The app can also send your grocery list as an email or as an SMS message. In addition, you can enjoy all these features for free. You can buy the premium version of this app and remove ads running in the background. Easily share your grocery list with our Shopping app. Grocery Smart - Shopping List Buying groceries becomes fun and easy with The Smart Grocery - Shopping List app for your Android device. The app has an intuitive user interface that allows you to easily create your grocery list. Its main interface consists of two menus: My New List and Cards. Tap New List to create a grocery list. To add an item to the list, just tap the plus sign in the lower-left corner of the screen. Then you will see a list of grocery categories. Tap a specific category and select an item you want to add to that category. You can also add new items manually and assign them to a specific If you have a loyalty card for shopping, you can save the data from your card through the My Card menu. Here you can get updates of the latest offers, freebies, and discounts from your reputable groceries. You can also create your list on your computer through www.grocerysmart.net. Syncing is also possible using the same app and linking your Smart Grocery account to your devices. Buy your shopping in the fun and easy way with the Grocery Smart – Shopping List app. The grocery tracker shopping list that maintains an adequate supply of goods is one of the main tasks of home owners. You never know when you need an object, only to find out you're out of supplies. Grocery Tracker Shopping List app helps you keep track of your home can use this app to list the supplies you need to buy at the grocery store. You can list the name of the item along with its specific details, such as price and quantity. In addition to being used as a grocery list, this app can be used to monitor and track supplies within your home. Under the Inventory page, you can add an item, its quantity, and where that item is used. You can track and track supplies from your home, workplace, business, and more. The Grocery Tracker Shopping List app can also be used as a recipe book. You can add your own menu, specify the components, and place the procedures to prepare the menu. You can also sync your grocery list to the cloud or store them securely on your device's external SD card. You have a virtual grocery list, inventory book and recipe book with grocery shopping tracker List. My Shopping List Another simple and easy-to-use grocery list app is the My Shopping (Grocery) List app. Although this app doesn't have advanced features like voice recognition and sync options, its simplicity and easy interface can be plus points to users who don't need complex features. To start adding an item, just press the Plus button in the upper-right corner of the screen. You can then place the name of the item and its quantity. You can also highlight an item from the list by clicking on it. Tap a lot on an item or press the button on the right side of each item to edit it. In addition to making your grocery list, you can also use this app for any kind of list. You can add a new list and name it as a task list, to-do list, food list, and more. The app also has the ability to send your list by email or as an SMS message. Easy to use shopping list - Listonic Another easy grocery catalog application is handy shopping list - Listonic. Just like the apps listed above, this app stores your grocery list inside your Android device, making it available wherever you go. What a entertained me was the animated category icons and home screen widget featuring the app. After you launch the app, you can immediately make a list. You can make a list for your home's groceries, supplies for the office, personal things, food, and much more. An item can be added to the list either by typing or through the recognition feature implementation. The app can also automatically group items into their respective categories. Categories are represented by animated icons, bringing more color to your list. You can also add the Listonic widget to the home screen of your Android device. With the widget, you can instantly add new items to your list without having to open the app from your app drawer. In addition, you can enjoy all these features for free. You can also enjoy extensive features such as syncing with other devices and making your list on your desktop computer by creating a Listonic account on and keeping supplies at home is an important task. With these grocery stores you can easily track and make your shopping experience fun and easy. Make sure to equip yourself with these applications before buying your groceries. How can you keep track of your shopping lists and groceries? Are you using an Android app for this? If so, what? And, what makes you like this app? Share your thoughts in the comments section. Section.
